PROFESSIONAL SUMMARY

Engineering student with strong foundations in Data Structures & Algorithms, SDLC, and full-stack MERN development. Experienced in building scalable and secure web applications, using Git/GitHub workflows, and implementing role-based authentication. Having a foundational knowledge of Artificial Intelligence, Machine Learning, and data-related concepts, with a keen interest in applying these technologies to build real-world solutions.

TECHNICAL SKILLS

Languages: Java, Python, C, JavaScript (TypeScript), SQL

Frameworks & Libraries: React, Node.js, Next.js, Express.js, REST APIs

Databases & Tools: MongoDB, MS SQL Server, Git, GitHub, Postman

CS Fundamentals: Data Structures & Algorithms, OOP, DBMS, Operating Systems.

Soft Skills: Problem decomposition, task estimation, clear communication, independent ownership of deliverables

EXPERIENCE

Full Stack Development Intern

Jan 2026 – Feb 2026

Civora Nexus Pvt. Ltd. (CivoraX Winter Tech Internship 2026) — Remote | *MERN Stack*

- Participated in all SDLC phases — design, development, testing, and deployment — of a QR-based authentication engineering tool for vendor and product verification.
- Implemented role-based access control (RBAC), secure QR code generation, real-time verification, and audit logging following software security and scalability best practices.

PROJECTS

VendorVerify – Smart QR Authentication System

Jan 2026

Tech Stack: HTML, CSS, React.js, Node.js, Express.js, MongoDB, JWT, RBAC, REST APIs, Git/GitHub

- Engineered a secure full-stack authentication tool to verify vendor identity and product authenticity using cryptographically secure, dynamic QR codes — directly applicable to engineering tool development.
- Implemented RBAC for Vendors, Consumers, and Administrators with secure session management — demonstrating understanding of software security and access control design.

Email Spam Detection System – Using BERT

April 2025

Tech Stack: Python, BERT (Transformers), Scikit-learn, Pandas, NumPy, Flask, REST APIs

- Developed an email spam detection system leveraging the BERT transformer model to classify emails as spam or ham with high accuracy, applying NLP techniques to real-world text classification problems.
- Built a configurable pipeline for tokenization, fine-tuning, and evaluation — demonstrating understanding of deep learning workflows and model optimization for production-ready performance.

EDUCATION

B.Tech. in Computer Science & Engineering

Graduation year: 2027

Government College of Engineering, Chhatrapati Sambhajnagar

CGPA: 7.59 / 10

AWARDS & CERTIFICATIONS

- Data Structures & Algorithms Certificate — Apna College (2025): Comprehensive DSA training covering problem-solving, algorithm design, and optimization.
- Full Stack Web Development Certificate — Apna College: Hands-on MERN stack development, REST API design, and scalable web application architecture.
